

are your credentials on the dark web?

We go into the dark web so you don't have to.

Digital credentials, such as usernames and passwords, connect you and your employees to critical business applications, as well as online services. Unfortunately, criminals know this – and that is why digital credentials are among the most valuable assets found on the Dark Web. When your employees use their work email on third party websites, it makes your business vulnerable to a breach. With our Dark Web Monitoring, we can detect if your company is at risk due to exposed credentials on those websites. By utilising Dark Web ID™, a combination of human and sophisticated Dark Web intelligence with search capabilities, you are able to identify, analyse and proactively monitor for your organisation's compromised or stolen employee or company data.

For your free dark web analysis and report, contact us today.
